South Kingstown Planning Board
c/o Jason Parker, Principal Planner
Town of South Kingstown
180 High Street
Wakefield, RI 02879

**RE: 551 Liberty Lane
South Kingstown, Rhode Island
Project #: 2214-008**

Dear Mr. Parker:

On behalf of the applicant, South County Post & Beam, we have prepared this letter to provide additional information to you on the above project to support the Preliminary Application. The existing site is an area of wooded vegetation and has a total area of approximately 6.3 Acres. A Class 1 survey of the property has been completed and the submitted plans reflect this. The wetland flags on the site have been flagged by a professional wetland biologist. The site has a portion of wetlands located in the northwest area of the site. The parcel has frontage on Liberty Lane and Fairground Road and has a total area of 6.31 +/- acres and is zoned IND-1 (Industrial-1). The site is located on the north side of Liberty Lane, south of Kingstown Road (Rte 138) and west of Fairgrounds Road.

The development proposes the construction of three new buildings with associated parking with the following areas; Building 1- 32,400 SF, Building 2- 22,500 SF, Building 3- 18,000 SF. The site is proposed to have two points of access off Liberty Lane. The development is proposed to be serviced by public water and public sewer. The sewer and water design has had an initial review from both Kingston Water and the Town DPW and we have responded to all concerns. We have met with the local fire department during the master plans submission to coordinate layout, hydrants, and access. The fire department is currently in the process of completing a final review of the preliminary plan set.

At this time all three buildings will be used for manufacturing for South County Post & Beam. Parking is proposed for each building throughout the site for a total of 64 parking spaces (approximately 21 spaces per building) for employees and visitors. The zoning code requires one parking spot per every two employees for manufacturing uses. In order to calculate required parking numbers we assumed each building had approximately 43 employees during the largest shift which South County Post & Beam feels is sufficient for their future operation. These assumptions yielded 64 parking spaces, which has been provided on the proposed site plan. We have also included an area for optional overflow parking in the case that more parking is needed this will be required to be some form of grass or impervious material. If additional pavement is proposed the storm water will need to be reviewed. The storm water management system has been designed to meet the Town of South Kingstown & RIDEM best managements practices.

The project has received a RIDEM Preliminary Determination for the project which include a full review of the wetlands and stormwater design.

We look forward to presenting and receiving feedback at this Preliminary stage of the development.

Sincerely,
DiPrete Engineering Associates, Inc.
